

CEE Commercial Kitchens Committee

Summary of Current Activities

Last Updated: June 18, 2009

The CEE Commercial Kitchens Committee has two main focuses: technology assessment and market strategy. Technology assessment involves analyzing the potential benefit to efficiency programs of developing efficiency definitions for new equipment categories, as well as revising current efficiency specifications as necessary. Market strategy involves discussion of strategies for program design and delivery that effectively engage the market and meet member savings goals.

The CEE Commercial Kitchens Committee last met on June 18, 2009.

Technology Assessment: The Committee is currently evaluating convection ovens and kitchen ventilation systems for specification development potential and exploring potential revisions to CEE Refrigeration, Ice Machine, and Steamer specifications.

Market Strategy: The Committee is currently developing guidance related to program delivery by market segment as well as strategies to more effectively engage chain account customers.

Other: The Committee has created a number of working groups to address each of the priority areas.

Committee members are encouraged to send topic requests to the CEE Contact below.
