

CEE Residential Clothes Washer Initiative

Qualifying Product List October 16, 2006

CEE's qualifying products lists are updated periodically. See the CEE Web site (www.cee1.org) for the most recent listing.
For Terms and Usage of this list, please see www.cee1.org/terms.php3

CEE does not administer rebate programs. Consumers who have questions about filling out rebate forms should contact their local utility. Please do not call CEE.

Other considerations:

- (Parentheses) indicate the model is discontinued but available. Asterisks (*) indicate that a coding variable may be used in place of the asterisks to indicate a color or feature that does not affect washer efficiency.
 - ***Bold italics*** indicate the model is a combination washer and ventless dryer. CEE does not require test data for dryer performance and does not certify the efficiency of the dryer.
- NOTE: A "ventless" combination clothes washer/dryer is one that does not have a hose attached to an outside source to vent air in the drying process. "Ventless" models instead have a condensing dryer system. The condenser dryer system replaces the traditional dryer vent allowing the combo unit to be used in space-constrained locations, such as old apartments where venting is not available. In this system, as clothes are dried, the air warms and becomes moist. The warm saturated air is then run through a condenser unit, which is surrounded by cold water. The cold water lowers the temperature of the moist air, causing the water to condense into a tray. Estimates of cold water use over the condenser unit range from 2 to 12 gallons per load.
- Although all models on the CEE list are very efficient, the tiers are structured so the most efficient products are listed in the higher tiers. For example, Tier 3B would contain the most efficient models.
 - The list is updated monthly. Check back frequently to ensure you have the most current list.
